<sup>1</sup> Muzeul de Istorie și Arheologie, Strada Monetăriei 1-3, Baia Mare 430406, Romania.

Like in many other European countries, during the past 15 years, Romania has seen an increased interest by archaeologists and history enthusiasts towards the reconstruction of artefacts and certain phenomenal aspects of the past. Whether the study approached a theoretical (Sima 2002, 77-82; Barbu 2015, 779-793) or practical aspect, such as reconstruction of housing (Cotiugă 2009, 303-342), workshops (Ardeleanu 2012, 72-73), ritual pits (Ardeleanu 2015, 59-96), textiles (Torcică 2015, 219-230), stonework (Zăgreanu 2010, 361-

363) or weapons (Borangic 2007-2008, 44-62; Borangic 2013, 821-836; Borangic, Barbu 2013, 22-47) all these archaeological experiments were conducted in order to find out and partially explain some issues of history that would otherwise remain unknown to researchers or to the general public.

The children were first presented with, and then experienced for themselves, methods of identifying, investigating and documenting an archaeological site: the children took part in a field surface survey on the archaeological site, conducted an archaeological systematic research and then documented, through photography and drawing, archaeological ceramics discovered by them.

There are several ways to promote history, one of them being historical re-enactment, a phenomenon that appeared in Romania in the past decade. The Omnis Barbaria Cultural Association began its activity in the summer of 2013, in response to the need to highlight the importance of the historical and cultural heritage of the north-western region of Romania. Most of the members of the association have previous experience in historical reconstruction, some of them taking part in numerous such-like events, along with educational and cultural projects as members or collaborators of some museums or re-enactment groups. Since it was founded, the association's activities have been focused both on the scientific and popularization aspects of history and archaeology.

The archaeological site of Bozânta Mică *Grind* point (Maramureş County, Romania) was discovered in 1992 as a result of a field surface research conducted by Dr. Ioan Stanciu (Matei, Stanciu 2000, 37). On this occasion, numerous pottery fragments dating from the Bronze Age, Roman Age – *Barbaricum*, and Early Medieval Period were found. The archaeological research project in Bozânta Mică was initiated in 2008 by the Maramureş County Museum of History and Archaeology, in collaboration with the Institute of Archaeology

and Art History from Cluj-Napoca. The main objectives are a full research of the site, including salvage, protection, preservation, restoration and the publication of the material which results from the archaeological research. All of these will contribute to a better understanding of the history of the lower basin of the Lăpuş River (Maramureş County, Romania). The first systematic excavations were carried out in 2009, followed, year after year, by other research campaigns (2010-2015). In recent years, several members of the Omnis Barbaria Cultural Association were present on the archaeological site participating in the systematic excavations conducted here, but also in some archaeological experiments (Ardeleanu 2015, 59-96).

In order to promote the archaeological site and research activities held at Bozânta Mică, the Omnis Barbaria Cultural Association, in collaboration with Raio Press and the Maramureş County Museum of History and Archaeology, conducted the first edition of the "*Omnis*

*Barbaria experimental archaeology Camp for Children*", between the 19th to 25th July 2015, as part of the International Educational Project "*Discovery-Discover the World!*". This was held at the archaeological site of Bozânta Mică (Maramureş County, Romania) and at the headquarters of Maramureş County Museum of History and Archaeology (Baia Mare, Maramureş County). Within this project, 40 pupils hailing from Secondary School no. 149 from Bucharest were taught the basics of the profession of an archaeologist, including how to manufacture hand-built and wheel-thrown pottery, the art of vertical loom weaving, and also experienced how to manufacture historical iron chain mail shirts.

The camp program was divided by days, in order to be as varied and well organized as possible. The first day was dedicated to the activities of the "*Little Archaeologist*" workshop. Children, accompanied by four teachers (Dorin Motohon, Ionca Vasile, Diana Moţ, and Iuliana Mitrache) and five archaeologists (Sorana Ardeleanu, Ancuţa Bobîcă, Dan Pop, Bogdan Bobîcă, and Marius Ardeleanu), went for a day trip to the Bozânta Mică-*Grind* archaeological site and learnt activities related to the archaeologist profession. The children were first presented with, and then experienced for themselves, methods of identifying, investigating and documenting an archaeological site: the children took part in a field surface survey on the archaeological site, conducted an archaeological systematic research and then documented, through photography and drawing, archaeological ceramics discovered by them (See Figure 1). They were also taught about the later stages of archaeological research of the pieces discovered: pottery conservation and storage.

The second day's theme was the making of hand-built and wheel-thrown pottery. The day started with a visit to the archaeological exhibitions of the Maramureş County Museum of History and Archaeology. In this way the pupils could benefit from a specialised guide, learning how the ceramic pieces discovered on the archaeological site were created and they were also familiarised with various aspects of different ancient civilizations. After a short presentation about modelling, decorating and firing techniques of hand-built and wheel-thrown pottery, at the archaeological site of Bozânta Mică, the pupils were divided into two groups. Some pupils managed to shape wheel-thrown pottery forms (coordinated by a local potter, Raul Vasile), some of them imitations of those found on the archaeological site (See Figure 2), whilst at the hand-built workshop they modelled (See Figure 3) masks from clay (coordinated by Professor Andreea Şchiopu from the Fine Arts School of Baia Mare).

The vertical loom workshop, after antique models (See Figure 4), was held at the Museum on the third day of activities and included an overview of the history of wool yarn from sheep's wool to the finished shirt. An explanation of all the methods of production, preparation, and processing of the wool thread was presented, then, students had the opportunity to test the work at four vertical looms (antique type). Also, fragments of fabric made on the vertical looms were sewn and bound with woollen girdles made by them. In parallel with this, the chain-mail knitting workshop, where they made fragments of chain-mail out of iron wire, and

the workshop where replicas of ancient military and civilian equipment were tested, were held (See Figure 5).

In promoting the activities of the camp, a temporary exhibition was opened at the Museum from the 24th of July to the 15th of December 2015. The exhibition contained pieces made by the students during the workshops, including hand-built and wheel-thrown pottery, sewing, weaving and stitching materials. The four vertical looms used by the students, the chain mail shirt workshop, and the armours and weapons presented and tested during the camp were also exhibited (See Figure 6). Different aspects of the archaeological camp were also presented through photographs taken by Zamfir Șomcutean.

The purpose of this camp was to help the participants (secondary school pupils and teachers) to discover and experience snippets of civilization that existed in Antiquity on the current territory of the Maramureș county Archaeologists from the Maramureș County Museum of History and Archaeology, along with members and volunteers from the Omnis Barbaria Cultural Association, helped the participants to be actively involved in the organised workshops related to an actual archaeological site, by being introduced to different techniques and crafts, through experimental archaeology and other activities.
